

Major Effect of Eisenhower's Condition Political, Babson Predicts; No War Seen

Uncertainty May Reduce Expansions

Roger W. Babson's business and financial forecast for 1958 is printed below. Recognized as one of the country's foremost business commentators and investment advisers, Babson has maintained an average of 88 percent correct for the past 19 years.

What its influence upon Russia will be, nobody knows. It probably will not affect general business. I believe that for some time our president has not been making important policies and much to his disappointment, his recommendations have been largely ignored.

The major effect of the president's condition will be political. These days the president, for both friendship and political reasons, are hoping for his recovery, both in health and in memory.

Others in charge of the Republican party, anxious about his possible incapacitation or death, would like to see him resign and drop out of the picture in order to give Vice President Nixon a good buildup in the hope of reelecting him.

Increased taxes or inflation or by the adoption of the Hoover economic recommendations for a radical economy.

Money Outlook: Money will continue to be tight during 1958 for new borrowers who have not established a satisfactory line of credit.

13. Concepts with large numbers of employees will receive first consideration both by banks and by the government.

19. Investors will continue during 1958 to switch from stocks to attractive bonds issues; fear of war will rule all markets.

Babson

(Continued from page 1)

As reported in 1958 and may be made more. Much, however, will depend upon President Eisenhower's physical and mental condition.

24. Congressional attempt will continue to eliminate the present exemption of labor unions from anti-trust laws.

25. 1958 will be a sad year for labor leaders. I forecast there will be an increase of unemployment during 1958.

26. Forecast that with the possible extension of the auto industry, there will be no national strikes during 1958.

27. I forecast that automation will slowly increase during 1958.

28. It wages should be fixed by a part of the cold war program. The price will also be fixed.

29. All workers' activity officer workers will be active through 1958. It will be more difficult for the next group of co-ops to graduate to good positions at such wages.

30. For the past few years labor has been sitting in the driver's seat. Many industrialists and political leaders have feared that the country is headed for a socialist or labor government. A cheerful sign now is that such fears may temporarily at least be forgotten. The American working man's money is being hoarded with too powerful labor leaders. This should be good news in all honest employees.

Real Estate Outlook

21. Land adjoining cities and towns will continue to be developed. This especially applies to small farms.

22. Large commercial farms will continue to prosper during 1958, but the small farmer will continue to suffer if dependent on farming.

23. Under an economic dictator, farmers would receive no more special subsidies. If farm prices are fixed, they will be at lower levels.

24. Large cities may continue to lose in population. Large city real estate will sell for less for fear of Russian missiles.

25. The growth of suburbs will continue, although many houses now occupied by well-paid executives will be forced on the market as their owners lose their present high-altered position.

26. Construction activity in some communities will decline. Other houses will come on the market.

27. In many sections of the country there will be a greater demand for cooperative modern apartment than for such houses, although old apartment houses will sell for less.

28. More young people and old people will insist upon every modern convenience and upon locations not absolutely dependent on automobiles.

29. Well located residential tracts, especially in the South, will continue to increase in price. This certainly applies to pine wood tracts, especially in the South.

30. Canadian oil reserves should begin to recover in price unless there is a return of cooling in the United States in late 1958.

31. The most important factor in connection with real estate is the parking problem which is a cause of almost every city. Suburban real estate and farms owe much to the automobile, but the automobile industry is now receiving a slap which could revolutionize present real estate prices.

32. We owe the automobile industry a debt of gratitude for our present prosperity. It is a helpmate of general business for 1958. It is however like everything else, subject to the business cycle and may be a cause of the next depression. Another probable cause will be the failure of one of the big corporations whose stock is among the "20 Blue Chips" of the Dow Jones.

Stock Market Outlook

33. The stock market is off the stock market. We will have rallies and reactions during 1958, but the broad trend will be downward. This is the first time for many years that I have said this in my annual report. There is too much talk about missiles, bombs and fallout.

34. While the stock market has
