Elderly Housing Project Is Okayed

The Wayne Housing Authority received word Friday that the city has been granted a contract loan of \$523,950 from the Department of Housing and Urban Development, according to Hep. Robert V. Denney. The money will be used for construction of a one-story multifamily building project consisting of 38 units designed for the ciderly. Planned site for the housing project is on both the east and

tween Fourth and Fifth in east Wayne.

Twenty-three of the units in the project-will be for individuals and 15 will be for couples. An activity center with office space, laundry, rest rooms and a large space for group activities is also planned. That building measures about 65 by 42 feet and will be located on the east side of Dearborn. Two of the other eight buildings in the project will be located on the west side of Dearborn.

.A members of the local hous-ing authority said the landforthe project, has not been purshased

Tentative plans call for con-struction of the housing project this autumn.

Work has been going on to get federal'aid in building the housing project since early in 1967. Working on the local authority are Mike Eynon, Rev. Frank Pedersen and Budd Born-

THE WAYNE HERALL

7 More Girls Enter Queen Contest

Seven more young girls have entered the Miss Wayne County Centennial Beauty Pageant, bringing the number of girls in the approaching contest to 14.
Said the president of the sponsoring organization, Mrs. Larry Koehimoos of the Mrs. Jaycees, "We're bound to have a successful contest now."

The new entries and their sponsoring businesses or organizations are Ruth Kenny of Carroll, Kavanaught Feed and Trucking; Denise Bansen of Winside, Winside State Bank, Angela Paulsen of Carroll, I Bank, Angela Club; Philis Miller of Winside, Commercial Club; Philis Miller of Winside, Troutman's Super Saver; Barmon Sebelibenter of Winside, Winside Commercial Club; Philis Miller of Winside, Winside Commercial Club; Philis Miller of Winside, Winside Commercial Club; Philis Miller of Winside, Winside Commercial Club and Rue Idamson, Jarvan-Horine Men's.

Winner of the queen's crown will reign all next week — unofficially designated Wayne County Centendal Week, She will receive a \$50 U.S. Savings Bond and other prizes. Prizes will also awarded the runners-up in the contest.

be awarded the runners-up in the contest.

Fight young glrls, all from Wavne,
kicked off the contest last week by officially announcing their entry into the
pageant. Those girls: Sue, Eulers, Lorraine Nelman, Sheryl-Wittler, Cludy Netson, Bonny Sternons, Verl Preston, Mary
Stevenson and Teresa Allen.

Girls will be judged in several areas-

Naming of the Centennial Queen will officially kick off activities celebrating the county's 100th birthday. Those activities include a paradactic day of the county fair later in the week, a beard contest at the fairgrounds and several other contents.

Pool to Close

The Wayne swimming pool will be closed Wednesday evening for a swimming meet between Wayne and Wakefield. The pool will not open after the regular 5 p.m. closing time. The Wayne city councilearlier July okayed a request that the pool be closed on the evenings of swimming meets to give pool workers a chance to have a break during those days. Ancouncement of the pool closing will be made in The Wayne Herald.

New Officers Named

Members of the Winside American Logion Post elected new officers recently. To be installed during a regular Legion meeting Aug. 4 are the following: Randall Bargstadt, commander: Al-Carlson, vice commander: Frank Weible, finance officer: George Voss, service officer: Cecil Prince, chaplain: Ollan Koch, adjutant; and Magmus Petersen, installing officer.

Allen Budget Hearing Planned for Friday

Planned for Friday

The mill levy for the taxpayers in the Allen school district will drop just over three mills if a proposed budget, is adopted by the school board.

A public hearing on that budget will be held Friday night at 8.30 at the Allen lilgh School.

Total being budgeted for the 1970-17 school year by the board is \$239,297. Based on the district's valuation of \$4450,786, a mill levy of 46,955 will be needed to raise the \$196,487 through local taxation.

The mill levy is broken down into 41,95 for general fund and 5,005 for bond redemption. Mill levy. In the district for the 1969-70. school-year-16-50,04.

Auto Rolls Over

Four area youths escaped injury around 10:10 p.m. Thursday when the auto in which they were riding rolled over in a ditch slightly more than six miles east

slightly more than six miles east of Winside on a county road.
Trooper C.L. Howell of the Nestingated and said Terry S. Pflueger, 17, of Wayne was driving the westbound vehicle. Howell said Pflueger apparently lost control after going down a fulfi. The auto-skidded off the road and over-See AUTO ROLLS, page 7

Credit to Cease

All four garages and several service stations in Wayne will begin accepting only cash or one of two credit cards for all parts, labor and service beginning August 1st.

The credit cards which will be accepted at the businesses are Bank America card and Master Charge,

The change does away with all credit for such things as a timeup, tire sale and grease job.

Those adopting the new cash-card policy: Wolske Autor Heeb's Buick, Frederickson Oll, Coryell Autor, Wordman, Auto, Kays Re-pair, Wayne Body Shop, Harry's Body. Shop, M. & S. Oll Co., M. & S. Repair, Claude's Stan-dard, Wayne 56 Service, Inter-national. Harvaster, Red Carr mational Harvester, Red Carr Impl., Mert's Econ-O-Way, Wayne Farm Equipment, and Lo-gan Valley Impl.

Anyone mailing a contribution should address it to the Winside should address it to the Winside beark. George Gahl, Tommy's father—who manages the Sears Catalogue Store. In Wayne, sadd Friday, afternoon that his son is in rather good spirits; and loves to get mail. "He looks forward to mail call every day," Gahl noted. The youngster has heard from many of his little friends and big friends too, according to his father, but continues hoping for lots of mail each time it is defivered. Mail will reach Tommy at Room 212, Children's Memorial Hospital, Omaha. Gahl said there is a possibility that his som may get to spend a few days at home in Winside prior to the operation. Farmer – Feeder Inside

The first annual Farmer-Feeder Section is off the press and inserted in this Issue of the Wayne Herald.
The special tabloid section, 12 pages long, 1s the
first venture by the newspaper into one of the major
sources for news stories in this part of the state—far ming

and feeding.

It contains news stories on such varied things as
the lagoons at the large feedlot northwest of Allen, the
swine operation of Irvin Haisch near Concord and the
reasons for the high mear prices. Advertising is farm
oriented.

Recognizing the economic importance of the farmer
to the Wayne area, the section will become an annual
affair, making its appearance in the Herald each year
about this time.

Beards, Beards, Beards

Good boards, bad boards, long beards, short beards, all kinds of beards will be on display during a beard contest at the Wayne (ounty Fairgrounds the second evening of the three-day, fair.

The contest is the finale to the Wayne County Jaycees' beard growing project.

Prizes will be given away to the owners of winning beards in several categories. Those categories will probably include best overall beard, most kissable and possibly most misergable.

sibly most miserable.
ludges from outside the county are being rounded up for the affair, scheduled for 7 p.m. on Frida, Aug. 7. No entry fee e-except a whiskery growth -is required and no admission will be charged. The contest will be held at the grandstand.

Tech Budget Okayed

Nobody appeared in opposition to the Northeast Nebraska Technical College's proposed budget for the 1970-71 school year during a public hearing last week. Adopted during the evening was a budget calling for a levy of 1.5 mills in the 14 counties the college district covers. Figured on a district valuation of \$550,000,000, the 1.5 mills would raise the \$840,000, which the board feels necessary to the board feels necessary to operate the school this coming

year.

__Total being budgeted by the board, is \$2,359,878.

The board's new levy of 1.5 mills is a drop from this year's

WSC Guests To Tune Up On Campus

A record number of high school musicians, about 330, began arriving on Wayne State campus Sunday for Summer Music Camp running through Aug. 2.

running through Aug. 2.

Dr. Raymond Kelton, director of the twenty-sixth annual camp, said the program will continue all of the the traditional groups band, orchestra, choir, stage band, small ensembles. In addition, the schedule includes regular rehearsals for the select honor groups which formerly practiced in spare moments.

practiced in spare moments.

The bonor band is scheduled to-play for Wayne-State's summer commençement at 10 a.m. Saturday. Aug. 1, in the Willow Bowl. All the honor ensembles will present a concert at 8:30 p.m. Friday, July 31, in Isam-sey Theater.

Other highlights of the week: a student recital Wednesday-night, the Camp Capers variety show Thursday night, dance and coronation of camp king and queen Saturday night, and the grand finale concert at 2:30 p.m. Simday, Aug. 2, in Rice Auditorium.

Your Money Just Went By

You pull back the curtain on a window in your home and your neighbor's little guy, outfitted in his baseball suit, is listle leaving from next door to go play a ball game that is the most important thing in the world to him. The reason he can play is because of your gift and others like hi to the Community Chest. Some folk in town didn't want to contribute to the Chest funds, but you have just had the pleasure of seeing some of your investment walk by.

ment walk by.

A young man home on military leave just walked down the old main drag in Wayne. He finds nothing more fun than being at home again. While he was away from home he was entertained and provided other services through the USO. The USO was one of the recipients of Community Chest monies. Your contribution to the Chest helped provide a few things for the lad while he was serving Uncle Sam. You just saw one of your investments walk by.

Did you see all of those pretty young ladies wrestling with their day camping

Were you able to attend the 70th Old Settlere Reunion at Winside last week? As always, the fruit of all the planning was another great county-wide celebration. A salute goes to all of you who put in hours and hours of work receiving only the wages of knowing you did your part. And that is morth a lot.

Wayne County was 30 years old when the annual celebration first started. Now the 100th birthday for the county is here. Utyssee 5. Grunt was President when.

Wayne County was organized. William McMayne County was organized.

Kinley was President at the time the county held the first Old Settlers Reunion. Do you suppose government leaders 100 years ago, or even 70 years ago, had any least that which the century man would be able to travel at 18,500 mph around the globe and then move 8 leastly across-the great chasm of space to set foot on the

-x-x-x-x-What do you suppose will be going on Wayne County in another 100 years If we were to be permitted toget a glimps of what will be going on then, would the activities, moral-values, mechanical in ventions and level of living frighten us Man advanced from the covered wagon. Man advanced from the cowered wagon to traveling in a space ship during the last century. It makes a person wonder what changes are ahead, We hope whatever charges are made that folk in Wayne. County will still have their carefree, jovial spirit and will get together to celebrate occasionally.

There is no doubt about Nebrasica being a good healthy place to live to a ripe old age. Would you have guessed there are some 187,000 persons age 65 and over in our-state? It's true according to the State Advisory Committee. The committee reports that with 12.5 per cent. O'll its population age 55 plus, Nebraska ranks third in the nation in the proportional number of oldsters. Only Florida and lowa, in that order, outscore the Corn-

THE PERSON OF STREET, PRINCIPLE OF

equipment at Johnson's Grove northwest of Wayne-several-weeks ago? Those Girl-Scouts, supervised by helpful mothers, camped in the grove for several days singling, playing, making handwork and learning routines of Ilving out of doors, Some of your gift to the local Community Chest went line the Girl-Scout program. If you saw those happy youngsters' on their way to adventure, you saw some of your money walk by.

Surely you couldn't help but notice all the dozens of children busy doing myriad things in Bressler's Park for several weeks recently during the summer park program. Again, you saw your money walk by.

That uniform ed curly-haired Boy Scout prancing his way down the street to manhood is headed toward an exciting camping trip. You just saw your contribution to the Community Chest run by—Those-folk-who. couldn't bring themselves to give to the Community Chest run bolt of fun watching their investments return living dividends.—McM.

husker state in this respect. Members of the committee pointed out two reasons for our third-place ranking. They noted that many young people leave the State to work and study elsewhere, and that people live longer in Nebraska than anywhere else on earth.

where else on earthwhere else on earthwhere of the property of the state of the

say you have never heard of the younger19? Torchave now.

J.W. had the adventure of shooting
pictures throughout he day at the ReunionThursday and ended the day with onlyone regret and that was we didn't have the
film or space for pictures of every one
of the entrants in the kiddles parade and
main parade.

Cooperation is the key word when
Under the selectation together. If no onecooperates then one might as well fold up
the plans and go home. Did you notice,
especially in the main parade, how many
entiles there were from towns surrounding Winside? J.W. couldn't help but be
thingressed by the number of parade entries made by the village of Carroll.
That town sure has a great neighbority
spirit, and it was obvious by their participation in the celebration.

spirit, and it was downed by their participation in the celebration.

While visiting over a picnic table Thursday noon with the Harlin Bruggers and Ray Lobergs, the subject of housing pigs became a central point of discussion. An idea which wasn't original, but which we all thought might have possibilities, is that of using old junked cars for housing sows and litters. With our tongues in cheek we concluded that farms could have a "Pig Parking Pen" containing the needed number of other are parked in Eashionable array. One door could be removed from each car to allow for entry and departure. The old mother sow could have a sociolouging area in the front seat. A sign on the trunk would identify that space as the nursery for the small pigglywigglies. Bumpers could be used to be need to the conveniences mentioned of such mobile homes. What did you say?

No, we were just drinking ice tea.

Winside has been host to the Old Settlers Reunion for years and residents

there have spent countless hundreds of hours annually to get ready for, hold and clean up affect the celebration. Volun-tarily spealing in behalf of the rest of the county, we want to express a big "thank you" to Winside for hosting such a delipitful mid-summer affair year after wear.

Winside will soon have their new half-million dollar elementary building completed. School administrators have been talking about having an open house in September. After fouring the building in a peech-preview, it appears to be very well constructed and should be fun for teaching and learning.

Let us elderlies talk about educating

Let us elderlies taik about educating the youngerlies for just a minute since classes will be getting underway again in only about four or five weeks throughout the nation.

**Educators are constantly working to keep students in the class room interested in subject material. Special classes are now offered for the oversayering end under-average students white average pupils have also been challenged by new audio-visual equipment and teaching methods.

J.W. wonders what the result would be if only one subject was taught at a time.
For two months a youngster would take
nothing but algebra; for another two
months, nothing but English, it would be a
program similar to the military's spe-

conflict between an interesting and un-interesting subject.

In most schools today children go from class to class - from Piglish to biology to math. instructors assign home-work without consulting other teachers -and pupils may either be loaded with home-work or have none at all. Exams all come at the same time and there aren't enough-hours' in the night for cramming.

Well, It worked in two experimental schools several years ago and a poll-of students and teachers showed only four per cent destred to return to the old plan of scheduling. The new plan is based on a theory illustrated as follows. If you were a writer, would it be easier to concentrate on writing one single book at a time, or would it be easier to be writing new single book at a time, or would it be easier to be writing new single book at a time, or would it be easier to be writing new single book at a time, or would it be easier to be writing new single books at a time and each hour you would add a little more to each

When those living in Wayne County celebrate Old Settlers Reunion in the year 2070, the educational methods we now use will probably be thought of as inadequate and inefficient. Of course some students are convinced of that in 1970. We live and

plece. -Miss Kamish, daughter of Mr. and Mrs. Loren Kamish, Wayne, will be married Aug. 29 to Kieth Tletgen, Wayne, son of Mr. and Mrs. Grant Tietgen, Wayne, at Redeemer Lutheran Church.

Attends Indiana Meet

Artends Indiana Meet
Mrs. Gerald Leapley, Belden,
recently returned from Lafayette, Ind., where she attended the
triennial National meeting of thited Presbyterian Women as a
voting delegate. About 80 women
from Nebraska made the trip
by chartered bus, and over 4,500
women, including representatives from India, Brazil, Japan,
Hawail, Korea, Thailand, Hungary and countries of Africa.
An Indian-American woman;
Mrs. Roy Denham, Albaquerque.

An Indian American woman; Mrs. Roy Denham, Albuquerque, N. M., was elected president of the national association, which has a membership of nearly a haif million. Nationally known speakers presented various aspects of the conference theme, "What Time Is It."

Northeast Extension Notes

"Tiome Accidents"

Parents spend millions of dol-lars annually to safeguard their lars annually to safeguard their children's health. Yet most par-ents ignore the fact that preven-table, accidents are the greatest threat to their children's physi-cal well-teing. Suffocation and choking are the most frequently reported causes of accidental deaths of children under one year of age. In the one to four year age Frount the frequent causes of ac-cidental death are fires, drown-ings and policonies. To these

lives than the six leading di-seases combined. If you have a child under 15 years of age, the chances are about one in three chances are about one in thre that he will be involved in a accident this year. The number one safeguard to preventing ac-cidents is personal motivation, diligence and a desire to maintain

dilligence and a destre to maintain a safe home and environment for the benefit of the family. Safety education, both for parents and children is of extreme importance. This kind of education starts in the home and should progress in school and into adult life. No one is ever too old, to be safety conscious and concernad about life itself. Teach_your family to be safety conscious and concernation to the safety conscious and concernation to the safety conscious and concernation to the safety conscious course when the safety week – July 19-25.

Reunion Planned

National Implications for All-Indian Conference

An all-Indian conference for American Indian tribes of South Dakota and Nebraska scheduled for late August is the direct result of the 'first Nebraska Conference on Indian Programs, held on the Wayne campus July 18 and 19.

The conference last weekend brought together some 50 Indian and non-Indians from federal and state agencies, private organizations and colleges to explore indian programs no operation now and planned in the future Indian participants articulated the needs and desires of the tribes they represented.

Trends in Indian program development by the U. S. Office of Education and the Bureau of Indian Affairs were stressed by two representeatives of these national agencies. Hesiquio Rodríquez, Title 1 programs specialist for the Office of Education, came to the conference from Washington, D. C., while Dr. William 'Buck' Benham, director of 66 FIA schools in the Navajo area, came from Window Rock, Arizona.

On Sunday, Indian participants in the conference stressed the need-for Indian-plansing, and coordination of programs concerning themselves, Indian Plansing, and coordination of programs concerning themselves, Indian Plansing, and coordination of programs concerning themselves, Indian Plansing, and coordination and programs concerning themselves, Indian Plansing, and coordination of programs concerning themselves, Indian Plansing, and coordination of programs concerning themselves, Indian Plansing, and coordination of the Winnebago Pow-wow grounds, with traditional tribal gathering on the Winnebago Pow-wow grounds, with two days of discussion of specific problems and needs of Indian people in South Dakota and Nebraska, the meeting's third day will be devoted to Indian specific golutions. Non-Indian-resource persons will then be Invited in to suggest lines of action.

The all-indian conference will very likely be the first national response to President Nixon's recent call to stimulate direct involvement of Indian tribes in programs for helping the Indian people. As such, it could set a precedence with nation-wide implications for tribes outside the two states.

Robert Mickey, Santee Sloux Indian and recently appointed director of the Nebraska Indian Commission, and Louis Laftose, member of the Winnebago Tribal Council, will coordinate the efforts of Nebraska Indians at the conference.

<u>Legion Raps Tekamah Friday, 8-7</u>

Singles by Wayne Magdanz and Butch Meyer and a double by lands Helpren spleed a five-run second inning outburst during wayne Legion's 8-7 handling of Tekamah Friday night.

The outburst grave Wayne a two-run lead in the contest after Tekamah pushed across three runs in the top of the first on two singles, a walk and two infield errors.

Tekamah titod the ramme at 5-5-on four hits off Wayne's Don

Tokamah thed the game at 5.5 on four hits off Wayne's Don Mau in the bottom of the second, "Leading 6-5 after Mike Biltoft sacrificed home a run in the third, Wayne collected two runs

051 002 0 -- 8 <u>4 4</u> 320 001 1 -- 7 11 3

Tekamah 220 001 | 7 11 2 in the sixth on Dennis Itedel's triple and Randy Helgren's sacrifice flys Tekamah nearly pulled the same out of the fire, squeezing across one run in the stath and another in the seventh: Young Mau allowed 11 hits in the contest, struck out five and walked four. His counterpart for Tekamah, Helff, permitted four his while striking out four and issuing five free passes to first. The victory should give the

local Legion squad a slight psychological shot for the approaching district tournament. That tournament is slated to start Thursday in Wayne with the Wayne team drawling a bye in the opening round.

Top Betting Payment Paid by Ak-Sar-Ben

A record payment of \$1,528,396.40 from the four per cent tax on part-natuel weggering has been mailed to Nebraska State Treasurer Wayne Swanson Ak-Sar-Ben. Ak-Sar-Ben Prosident Frank Ak-Bar-Ben Prosident Frank

by Alk-Sar-Ben,
Alk-Sar-Ben President Frank
Pogarty-amnounced that the State
participated in the Alk-Sar-Ben
Races to the sum of more than
\$1.6 million. The total includes
the parl-mutuel tax, state admission tax, dally track license,
individual licensing fees and the
state sales for.
The breakdown: parl-mutuel
tax, \$1,28,396.40; state admission tax, \$84,850.00; daily track
license, \$9,260.00; vales tax
(setimated), \$55,945.90; for at,
\$1,675,590.30.
Alk-Sar-Ben also collected an
estimated \$10,000 in individual
licenses which, along with the
admission taxes;—are earmarked
for Nebraska's county fairs.
The pari-mutuel and sales taxes
go into the state's general fund.
Proceeds from the race meeting go to Ak-Sar-Ben's program
of agricultural, charitable and
ducational activities.

639 lab Cackers

639 Job Seekers Registered at Norfolk

A total of 639 job seekers had registered with the Norfolk Department of Labor-office at-the-close of June, slightly lower than the 650 who were registered at the end of May and considerably lower, than the 837 registered at the end of June a year ago, Youths under 22 years of ago accounted for 282 of the current job seekers, while 84 were 45 years-old and-over.

While there are a number of people seeking work, the Norfolk office points out, there was a decline of nearly 200 compared to last year. This Can't at airributed, the office says, to a variety of factors, including an increase in the year-round school activities, increased number of servicemen on active duty, star-bilization of the work force and bilization of the work force and availability of agricultural and road construction jobs in out-lying countles.

lying counties.
There were 159 job openings received in June of this year compared to 274 iri May and 388 iri more of last year.
Jobs filled by the Norfolk office during June numbered 199, 63 of which were on farms and ranches. Forty-two veterans, 70 youths under 22 years of age and 13 individuals with varying handiags were among those placed, caps were among those placed, Wholesale and retail trades showed the most strength in the past month, reports the Norfolk office.

office.

A representative of the Norfolk office will be in the Wayne Chamber of Commerce on next Wednesday, July 29, at 9:30 a.m. to help any area people with employment problems they may be having.

Rambling Pipe Organ Back at WSC A pipe organ that began its chundra church life in 1923, rest to fin a farmer's barn for seeral years, gained new life and appear State College a decade go, now has made a journey of Ulidden, Ital, and back to wayne tate—thanks to art student lynn its motor—the housing thickly new form of Glidden, file old orean's story—began motor—the housing thickly insulated to mutife, wind and file old orean's story—began motor—onlese. A pipe organ that oegan its Omaha church life in 1924, rest-ed in a farmer's barn for se-veral years, gained new life at Wayne State College a decade ago, now has made a journey to Clidden, la., and back to wayne

Insulated to mutting the wind and motor noise.

Arnold completely rewired the organ, using a mile-long reel of wire Lo connect the console with the electromagnetic air valves on each of 487 pipes.

Because they added 91 pipes, they also had to remodel the console to add wiring and stops to control the pipes.

What was the hardest job in the organ rebuilding?

"Moving it," was Dobson's quick answer. Wiring proved to be the most troublesome problem."

Why did he undertake such a task"

"I just wanted to," Dobson explains simply.

"I just wanted to," Dobson explains simply. explains simply.

How does the organ comparenow with its previous sound?

Professor Garlick was existate when he played it: "No comparison! Much "Teher, much brighter! I never had it sounding like this."

barn of a farmer near Valley who had a collection of old organs.

About a decade ago Prof. Antony Carlick, who teaches organ at Wane State, discovered the retired St. Paul's organ and for about \$2.50 bought its parts, which were strewn about the barn. With the help of the Rev. Robert Schirck, then of Wayne and now of Omata, Professor Garlick assembled the organ in the auditorium of Wayne's Administration Building, For several years it served as a practice and recital organ. Then it became inonerative.

That's the history. Now enters senior student Dobson, an organ bage who has fearned a lot about the mechanics of organs, but can't play them, the Is majoring in art, minoring in insuspiral education.

Last spring he gained permission of college officials to dismatch the organ and cart. Garlick speaks authoritatively out organs, He has played some

about organs. Ite has played some of the great organs of Europe and North America.

Dobson, an avid reader of books and cat a logs about organs, estimated this Instrument, It metoday, would cost between \$13, 000 and \$20,000. Hence, the \$250 investment a decade ago, plus 2,000-plus hours of free Dobson-Arnold labor répresents a considerable bargain.

COUNTY NEWS

mission of college officials to-dismantle the organ and cart it to his family's farm home near Glidden. There he rebuilt it, with the help of a Glidden friend, Bill Arnold, a licensed electronics technician. From late April until early June, the pair spent more than

two games at the Winside ball

IN STORE SELLING

Cpl. Willis D. Nixon, son of Mr. and Mrs. Ivan Nixon of Wakefield, arrived home July 16 after being separated from the Marine Corps in San Diego. Nixon enlisted in October, 1988 and began active duty January, 1983. He took basic training at San Diego and advanced training at Camp Pendleton, Calif.

Waldbaum Eggs - Big Business in Wakefield

By Merlin Wright

If you had eggs for breakfast
this morning, you may be part
of an industrial success story
coming out of Wakefield.

It is a story of processing
eggs by the dozen and by the
dozens of dozens. In fact, the
Milton G, Waldbaum Company
in Wakefield last year handled
about 452 million eggs produced
by approximately two millionerry busy hens in a three-state
area.
As the earth turns on the exter-

area.

As the earth turns on its axis
and the morning sun brings a
new day around the globe, eggs
and egg products processed in
Wakefield are consumed through-

Wakefield are consumed throughunt he United States and Europe.

More than one soldler in Viet.
Nam has tasted "Eggs like grandnia used to break!" due to the
world-wide marketing of Wakefield Eggs or a by-product.
A story of expanding industry,
which other small communities
looking for industry might well
covet, began in 1950 when Milton
G, Waltbaum started production
in a small plant at the north end
of Wakefield employing about 25
persons. Now, 20 years later,
the plant hires 300 personnel
and, according to the company's
vice-president, Dan Gardner, the
firm had over a million-dollar
payroll last year.
Just exactly what goes on at
a plant handling on the average
of 100,000 cases of eggs a month?
Where do all the employees come
from? What type of products
are made?
We had these and many other

Where on all the changes of products are made?
We had these and many other questions to ask Gardner, who has managed the egg plant for the past 18 years. The vice-president of the company is often on a business trip into Chicago or New York, but he was at home in his office Monday and invited us on a tour. Ite first explained, "We have depart mentalized our plant-operations," and noted that each of 14 departments have a manager, Departments have a manager of the partments h

teet by Gardner.

The egg story actually starts in hen houses scattered in South Daloida, lowa and Nebrasika. Some of the 50 trucks in the Waldbaumfleet bring the eggs to the plant where they are unlosated a case at a time by conveyor. After they are weighted, checked for clean-liness and loss, the eggs are moved into an area where they are divided. Some cases of whole eggs on the huge enfrequently are divided. Some cases of whole eggs on the huge enfrequently are divided. Some cases of whole the property of the start which have not present and processed into the broken and processed into

numerous products and pack-

ages.
Figgs going into coolers are sampled after being unloaded and records kept as to temperature, quality and outward appearance. Bob Penn explained the process to us. Whole core are ture, quality and outward appearance. Bob Fennexplained the process to US. Whole eggs go through one of four automated machines which wash, court and put them that carrions according to grade and size. The carrons are then boxed and placed in refrigeration until trucked to a commercial buyer. Eggs being put into cartons at the time we toured the plant were destined for stores in Chicago. Eggs marked for in-plant use enter one of two egg-breaking centers, whereas all eggs were broken by hand in nast years the operation is now being automated. At the present time some eggs are broken by hand and others enter automatic breakers made in Denmark.

The egg whites and yolks are combined into liquid form or may be separated into containers of all whites or all yolks, depending upon the product for

THREE OF THE NEW automated eggbreaking units in the Waldbaum plant are tended by three employees and

are part of the plant's constant opgrading program toward efficiency and production.

Ploneer children in Nebraska romer chiaren in Neoraska spent spring and summer days tending cattle in the pastures, For protection against rattle-snakes, they carried a six-foot pole with a four-inch spike on the end.

Penn explained that when they are preparing an order for dried whole egg, the liquid containing the combined yolks and whites the blown into one of three high-temperature dryers. The process removes the moisture and the remaining product is dried egg which is purchased by large companies manufacturing such products as cake mixes, doughnuts or noodles.

The dried eggs are packaged in various ways depending upon what their final use is to be MucD, of the dried egg is placed into a product is the standard of the product is ready for use by merely mixing a Small amount of water by mything a Small amount of water or milk with it.

Other amounts of the combined yolks and whites liquid is

Much, of the dried egg is placed time they enter the plant until into large drums while some is packaged in small foil bags for use in the family kitchen. The product fis-ready for use by merely missing a Small amount of water ty missing a Small amount of water or milk with it.

Other amounts of the combined yolks and whites liquid is frozen rather than dried and is purchased by such firms as baby food canneries, bakeries and candy houses. Some buyers have a use for only the whites or only the yolks, so the plant dries and freezes vast quantities or each.

Final products are loaded and trucked to the buyer. Penn noted that there are probably at least 12 to 15 trucks which arrived and trucked to the buyer. Penn noted that there are probably and prior to shipping, the said records are kept of every in cords, and prior to shipping, the said records are kept of every in cords, and prior to shipping, the said records are kept of every in cords, and prior to shipping, the said records are kept of every in and prior to shipping, the said records are kept of every in cords, and prior to shipping, the said precords are kept of every in and prior process.

Final products are loaded and trucked for in-plant use enter one of two egs-breaking centers, Whereas all eggs were briden by hand in past years, the operation is now being automated. At the present time some reggs are broken by hand and others enter automatic breakers made in Denmark.

The egg whites and yolks are combined into liquid form or may be separated into containers of all whites or all yolks, depending upon the product for own which they are being prepared.

After going through a pasturized and being the product for cooled and stored in insulated storage tanks.

Final products are loaded and trucked to the buyer. Penn noted that they handled an everage of 100,000 cases a month or about 430 million ergs last year.

Inter-departmental communications in the list of the plant's product for sugared eggs; fortified, standing upon the product for sugared eggs; mybole eggs, all continued to the plant's product which they are being prepared.

After going through a pasturized and homomorphic they are being prepared.

After going through a pasturized and homomorphic they are being prepared.

After picking up a peculiand doing a little figuring, a content of that they handled an average of 100,000 cases a month or about 430 million ergs last year.

Inter-departmental communications in the list of the list of the plant's production which includes dried or sugared eggs; fortified, standing the work between personnel and departments. A closed circuit television system provides Granter and others in the adversariation process.

After going through a pasturized the product for the list of the blant. Procket radios are used by head form the plant's production which they are being prepared.

After going through a pasturized the product for the list of the list of the blant and the plant's production which in land the product for the list of the plant's prod

summon them.

"Eggs are processed now on a 12-month basis," Cardner noted, so the plant runs year roundOur peak season for eggs is between the months of April and September. We have been able to take government contracts which allow us to work around the clock for seven days."

Gardner said it was actually only the dryers which run seven days a weekees it is more culticient. "We can break in five and a hall days what it takes seven days to dry," he said.

After showing us the operation of several new pieces of auto-

days to dry," he said.

Farming Is Area's Number One Industry

Without a doubt, the farmer is the No. 1 "industry" in the Wayne

Estimates by somebody who lows just how important the knows just how important the farmer is, Wayne County Agricul-tural Agent Harold Ingalls, may give the uninformed a better picof what the farmer means to the area.

Ingails says that the farmers in the area have at least 10 times the economic impact on the area that Wayne State College does. In other words, if the farmer were to disappear tomorrow, says Ingalls, it would take about 10 colleges the size of WSC to replace him economically.

Says Ingalis: "We shouldn't forget about the college's importance to Wayne and the area, for it is important. But the farmer is often overlooked when doltars and cents are being talked about." The farmer is invaluable to a large majority of businesses in Wayne, says ingalls, and we too often forget that fact.

And to support these statements, ingalls is able to pro-duce statistics and facts about the farmer in this part of the state.

In 1968 there were a total of about 990 farms in Wayne County. Those farms produced a total of 5.6 million bushels of corn off 94,000 acres. Other produce

bushels of oats off 27,000 acres, .75 million bushel of sovbeans off 25,000 acres and 90,000 ton of hay off 35,000 acres.

At the same time as they reaped those products, the farmers were raising 6,500 milk cows and feeding 95,600 cattle. Swine producers raised a total of 118,000 pigs in that year.

Ingalls said there has probably been a 25 per cent increase in at least two of those areas— soybean production and cattle feeding.

One indication of the amount of business the farmer generates would be the fertilizer used in 1968. In that year the farmers in Wayne County spread a total

of 6,500 ton of fertilizer in their

Maybe that amount doesn't sound like much, but it would take a train load of cars stretching better than two miles to bring that fertilizer into Wayne at one

The mayor of Wayne, Kent Hall, realizes the importance of the farmer to Wayne and the

Says Hall: "There's no question about the farmer's importance. We are a farming community and the farmers are a large part of it. The city of Wayne can be called the business hub for the farmers who are the production end of the economy."

Meats' Quality Most Important To Housewives

Quality is the number one consideration when buying meat, according to 3,000 U.S. homemakers who responded to a recent survey of the USDA's Statistical Reporting Service.

Considerations noted but less important than quality when shopping for meat included flavor, minimal waste and healthfulness said Mrs. Sandra Dickison, University of Nebraska Extension food and nutrition specialist.

The four meats receiving de-tailed study in the survey were beef, chicken, ham and fresh pork. None of these meats met all of the consumer's standards. However, beef and thicken emerged with a fairly good "image."

Beef ranked high on the basis that it it tasty, healthful, easily digested and relatively free of waste. The majority of those interviewed did rate beef as wanting in one area: they did not care for cold beef.

Chicken was listed as a favorite, especially in the "coldto eat" area. Other pluses were flavor, digestibility and variety of preparation methods. Disad-vantages were listed as poor kneping qualities when raw and the fact that it can become tiresome if served too frequently.

Ham - s moked or cured pork - was credited by most of the women as being tasty, good to eat, suitable for both warm and cold weather meals, desirable for keeping qualities and appropriate for "company fare." The homemakers reported that they served fresh pork more often than ham and thought it was tasty. but it was not rated as a meat they were likely to serve to dinner guests, specially when meat preferences were unknown.

Lamb was studied in less detail than other meats in the survey, and it was used less for family meal preparation. Women did report that one of the reasons for not serving lamb was be-cause their parents had given them little or no opportunity to acquire a taste for it.

Complaints about meat in gen-eral focused on packaging. Many of the consumers felt that prekaging interferred with their packaging interferred with de-ability to judge meat quality be-cause they could not see the under side. They also shied away from buying frozen meat because they were unable to judge its freshness and quality.

General Insecticide **Handy for Gardener**

Every gardener should have a good all-purpose insecticide-fungicide at hand for general spraying during the growing season. With many products on season. With many products on the market, it is very confusing to the backyard gardener what to buy for what bug and when to

Several materials on the maret can be mixed to make a good all-purpose spray that will be ef-fective for most insects and diseases, reports the University

A suggested combination for use on ornamentals and vege-tables is a mixture of two level table spoons 50 per cent Sevin or 50 per cent methoxychlor plus level tablespoon of 50 per cent diazinon or two level tablespoons 25 per cent malathion.

Sevin and methoxychlor are for chewing insects and some kinds of sucking insects. Malathion or diazinon are for con-trol of aphids and mites. Diazinon is probably better against mites than malathion. Sevin should not be used on Boston ivy as it will burn severely. ivy as it will burn severe.... One of the standard fungicides

can be added to the insecticides. Maneb, Zineb or Phaltan could be added at the rate of two level tablespoons per gallon of spray.

Wettable powders are recom-mended for mixing, as the chance of chemical burn to plants is much lower than with liquid forms of insecticides. If wettable powder insecticides are not available, use the emulsion conentrates, but do not mix with other wettable powders.

Mix only the amount that will be used in a short time. If spray mixtures are allowed to stand in water for several hours, they may become ineffective, especially in water that is alkaline

Area Feeder Likes High Moisture Grain

Arnold Janke, a fairly large cattle feeder between Winside and Wayne, has one comment about high moisture grain: "I really like it."

Janke feeds about 700 to 800

cattle each year and puts emphasis on his appreciation of the high moisture feed. He has two 8,000 bushel bins on his one feed lot and transports the feed by "electric roller to his feed wagons.

The feed wagons take the grain to a long concrete feed bunk only recently completed.

The concrete bunk measures 440 feet long and was started by Janke early this spring. Cattle

were first put into the lot with the new bunk last week.

Farming about 400 acres, Janke says he doesn't think very much of the new cross breeds such as Charolais which are making their appearance more and more. His preferred breed -Hereford.

Janke says he feeds mostly calves, bringing some into his lots in July and some in September. He will often feed yearlings in the fall.

The 400 acres Janke farms with his son and his hired man are broken down into about 300 of corn, 100 of soybeans, 80 of alfalfa and the rest in oats and pasture.

Row spacing in his corn is 38 inches because it makes it a little easier to hold the tractor and equipment on the hillsides than 40-inch spacing, he says.

All the corn is banded with pre-emergence herbicide. Also, the corn and the alfalfa is fertilized according to a fertilization program the farmer sticks fairly closely to. Soil testing is done to give Janke an idea of what should be going into the

Although he treated for rootworm this year, he did not treat for corn borer. Janke said his crop is on the borderline and the insect has done some damage, but it didn't warrant treatment.

Janke has lived on the same farmstead four and a half miles east of Winside for the past 27 years. He began farming west of

The Wayne Herald Farmer-Feeder, Monday, July 27 Winside.

The Janke's have three sons: Dennis, who helps his father in the operation and twins, Robert and Phillip at home. His wife's name is Marguerite.

1969 Dairy Cow Record Producer

The 1970 Nebraska-Iowa District Dairy Shows get underway today (Monday) with the first show at South Sloux City.

The other shows are scheduled for Hemingford, July 30; North Platte and Denison, July 31; Norfolk, Aug. 3; Fremont, Aug. 4; Beaver City, Aug. 5; Seward, Aug. 6; Grand Island, Aug. 7, and Beatrice and Council Bluffs,

Aug. 8.
All 11 shows are a three-way partnership including the local sponsor, the Omaha Chamber of ommerce and the Knights of Ak-Sar-Ben.

The chairman of the Omaha committee, Bob Koehler of Mid-America Dairymen, Inc., says the shows, which have been held for the past 23 years, have made a significant contribution in keeping youth interested in the dairy industry, and that winning and losing is part of the character

building process for youngsters.

The shows are also a prerequisite for showing at the Ak-Sar-Ben Livestock Show in September.

Nearly 900 4-H and FFA exhibitors are expected to bring a total of some 1,300 dairy animals to the shows to vie for ribbons and premium money.

in addition, each show will be represented by a Dairy Queen, one of whom will be chosen Queen of the Rodeo Night during the Ak-Sar-Ben Stock Show. Other special prizes will be awarded for fitting and showing contests, and junior herds.

NATIONAL 4-H WEEK National 4-H Week will be observed in 50 states October 4-10. The theme is "We Care."

Beef Prices -- Why Are They So High?

found consumers paying more for beef than they have at any time since 1951. Higher beef prices have received nationwide attention, even housewife boycotts.

Adapted from a North Daketa State University report by University of Nebraska agri-cultural economists,

and speculation as to which sector of the economy is benefiting most from the increased prices. is getting the profit - the cattleman, the feedlot operator, the meat packer, the wholesaler or the retailer?

An analysis of the meat price situation over the past several months reveals that the meat retailer is - at present - benefiting the most from high beef

Choice carcass prices for beef in the United States reached a peak of 71.8 cents per pound in June of 1969, then declined to 59.6 cents in September. Whole-59.6 cents in September, Whole-sale prices also declined from 77.6 cents to 66.7 cents, while retail prices declined from 102.1 to 99.2 cents during the same period. (September wholesale and retail prices are the most recent national figures avail-

These figures point out that the total decline in the price of choice beef at the retail level from June until September was only 2.9 cents, compared to drops of 12.2 and 10.9 cents at the dressed carcass and wholesale levels.

The 12.2 cent decrease at the slaughter level represents a reduction four times that of the 2,9 cent decline at retail.

These figures suggest that changes in slaughter cattle and wholesale beef prices are not closely reflected in retail prices. Part of the reason for this is that retailers prefer not to alter their meat prices in response to day-to-day or week-to-week fluctuations in the live cattle nd wholesale meat markets. Also, meat is not sold to customers on the same day - or even the same week - that animals are for slaughter, so a lag exists in the response of retail prices to slaughter cattle prices.

Retailers attempt to maintain somewhat constant margin on the meat they purchase and re-sell. However, a comparison of

national retail, wholesale and slaughter beef prices from 1965 to 1969 reveals that retailers appear to be more willing to increase retail prices during per-iods of rising wholesale prices than they are to decrease prices when the wholesale price is declining. So generally, the de-crease in the spread between slaughter and retail prices during rising beef prices won't be large as the increase in mar gin when the slaughter cattle price declines.

Price competition is considermore competitive the slaughter level than at the retail level. The lower degree of competition at retail and the tendency of netailers to stabilize prizes means that beef prices will not fluctuate nearly as much at retail as compared to the slaughter level. Once retail prices have reached a certain level and consumers have become accustomed to paying the price, the lower level of price competition at the retail level will allow retail prices to remain relatively strong even though cattle prices have declined.

Although beef prices increased substantially during the first half of 1969, the increase in beef prices still has been much less than the average price increase of all goods and services purchased by consumers. Removing the effect of inflation on increased prices in the economy by the use of the Consumer Price Index shows that the retail price of choice beef increased by 24 per cent compared to a 28 per cent increase for the average of all goods and services since the 1957-59 base period. The cost of medical care alone increased by 45 per cent. Homeowner costs increased by 27 per cent, public transportation by 38 per cent and the average cost of all services, such as legal, utility and repairing fees, by 39 per cent. Although prices of many goods

and services increase each year, consumers appear to be much more senstitive to increases in meat prices than to increased prices in other goods and services. Just why this attitude prevails might be explained by the way disposable income is de-

Technically, disposable income is the amount of income a person receives after taxes have

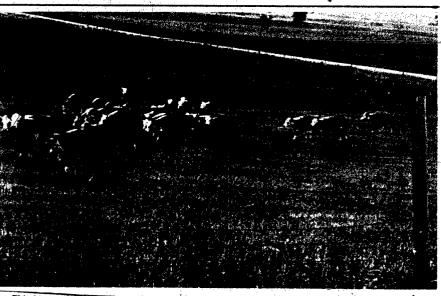

American/consumers spend less posable income for food, which is far less than in any other country in the world. Six per

cent of disposable income goes

-- 2000 PM

for the purchase of meat.

The typical consumer, however, may not define disposable income this way. Instead, dis-See BEEF PRICES, page 5

(Continued from page 4) posable income is viewed as that amount remaining after taxes and other regular monthly billssuch as car payments, house or rent payments, furniture payments, utility bills, insurance and other installment payments have been made.

What is left in the family budget after these payments represents income available for the purchase of food, clothing, entertainment and incidental items. Of this "disposable" income; food. represents a substantial per-centage. Meat represents the largest expenditure for a single food item. Therefore, a relative ly small change in the price of beef becomes very noticeable in terms of its effect on the remaining disposable income. Rather than spending six per cent, the consumer may feel he actually spending from 30 to 50 per cent of his disposable income on meat.

pricing of beef cuts is difficult to understand, because the beef carcass loses its identity as it is broken down into re-tail cuts. Trim and byproducts are deducted from the initial weight, and then different cuts of meat are prices at different evels - a T-bone steak is priced higher than a chuck roast, for example. So it's almost impossible for someone at either the consumer or producer end to compare the price of retail cuts to the price received for the live

4-II PROJECTS

More than 100 different 4-H project areas - some on television - are offered to the nation's youth by the Cooperative Extension Service.

Work, Accident Stalls Carr's Farrowing House

on a tractor are the reasons Loren Carr of rural Allen hasn't completed his new farrowing

The farrowing house, started last fall, is a wood frame build-ing 88 by 27 feet with 100 per cent slotted floors. The floors alwastes to fall into pits measuring 75 feet long, nine and a half feet wide and three feet deep. The farrowing building will house 30 sows.

Carr, who has been in farming for about the past 12 years, says he anticipates he will have to pump out the pits about twice a year when he gets the farrowing house into full operation. The wastes will go into a spreader and be used on Carr's land. Result: nearly zero cleaning.

Automation pretty well sums up the operation Carr has in mind. Feed will be augered from a 50ton computerized grinder-mixer about 60 feet from the farrowing house, doing away with a lot of physical labor.

When carr gets his planned fin-ishing house built — his hogs are now finished in open pens - he will have it located about 100 feet from the grinder-mixer feed can be auxered to it also. The anticipated size of the finishing house: 30 by about 150 feet.

Carr, who farms about four miles northeast of Allen, said he began farming after two years in the service by feeding 10 to 15 pigs. He projects he will be farrowing about 1,500 a year when he gets his new house in opera-

When operating, the farrow ing building's temperature will be kept at 78 degrees by gas heat in the winter and four fans in the summer. One of those fans will be a modulator and will run 24 hours a day, speeding up and slowing down as the situation demarids.

Raising and selecting all his own sows. Carr says he markets most of the time in Sloux City. When marketing, he often takes part in the checkoff program where a nickle for each head goes to help better the image of pork. The pork organization, says Carr, has done a good job and has helped build a better image of pork in the past few

Another interesting aspect about the Carr farm is complete dependence upon minimum til-lage, a practice which does a great deal to conserve moisture and reduce erosion, according to Carr. He has used minimum tillage for about the past five years. His comment: "I wouldn't go back to the plow."

Mr. and Mrs. Carr have four children: Cindy, 15; Diane, 12, Greg 9, and Scott, 7.

can cream of mushroom soup

1/2 soup can of water

3/4 package of dry onion soup sprinkled over top of rice and

Place the contents in a small greased roaster. Put in one or two layers of pork chops (about five) or pork steak on top of rice. Sprinkle remainder of dry onion soup on chops. Cover and bake at 325 degrees for two hours. Serve with salad and ve-

Yard 'n Garden Tips

Q-What treatment is to be used for iron deficiency in strawberries and peonles?

A-A commercial product of iron sulfate would be the best remedy. Apply the treatment around each plant. In the case of peonles, use about one-fourth cup around each plant, and be sure the solution is worked into the root zone. Treatment for strawberries should be at a strength of about one-eighth cup per plant or four pounds per square rod.

Q-Treflan pre-emergence herbicide was used to control the spread of weeds, but it seemed to slow the plant progress. For example, cucumbers wilted and died. Why?

A-Although there could have been other complicating factors damaged the plants, there is a strong possibility of an overdose in usage. Treflan should be used in very small amounts. In small areas Treflan should be used in amounts of about 1½ table-spoons per 1,000 square feet. Used in larger areas, it should be at a strength of about one or two pints per acre.

Q-The leaves on a pin oak

turning yellow and have small nodules on them. What is the cause and what can be used as a remedy?

-The nodules are probably what is commonly called gall. As of late, there is no specific control for this condition. It may help somewhat to spray one of the systemic insecticides earlier in the year. Normally, gall does not cause extensive or extremely harmful damage to the tree. The yellowing, most likely, is simply a sign of new

MEMBER F.D.I.C.

A FULL SERVICE BANK

1969 Dairy Cow Record Producer

The average Nebraska dairy cow produces 69 per cent more milk today than her counterpart of 20 years ago and 33 per cent more compared to her counterpart of 10 years ago. The average milk production per cow in 1949 was 4,700, in 1959 it was 5,950 and in 1969 an all time high of 7,925 pounds.

Those statistics come from C. W. Nibler, extension dairyman at the University of Newscatter

In ten years the number of milk cows has decreased by 42 per cent but because of increased milk production per cow total milk production has decreased only 20 per cent.

The increase in milk production per cow is the result of application of research results in feeding, breeding and management by Nebraska's dairy farms. Other factors contributing to increased production per cow is a very favorable feed-milk price ratio and improved marketing facilities for fluid milk, says Wibler

In this 20-year period average annual production per cow for

cows enrolled in dairy herd improvement associations has jumped from 8,860 in 1949 to 9,880 in 1959 and 11,880 pounds in 1969. At the same time the number of cows enrolled in the DHIA has increased more than four times from about 4,000 cows in 1949 to 10,440 in 1959 to 18,000

The top producing 1969 dairy herd enrolled in Nebraska's DHI program, according to Nibler, will average about 17,000 pounds of milk per cow.

Preliminary figures indicate that for 1969 total cash receipts from milk marketed by U. S. and Nebraska farmers will reach an all time high although fewer herds and less cows are found upon the farms.

Dairying is becoming more and more a business, notes Nibler, with herds becoming larger and mechanical labor savers allowing dairy farmers to handle more animals per man.

Many dairymen today keep and use good records and study ways to improve production per animal in order to increase their net income from the dairy herd, the dairyman concludes.

Ramp Saves Losses

If you raise cattle and want to increase your efficiency here is a plan for a permanent loading ramp that may help you. In addition, heavy losses occur each year from cattle bruises. Two-thirds of the bruises are caused by crowding, rushing or bumping of the cattle, much of which occurs while g and unloading them.

This plan is designed to build a sturdy loading ramp that insures you quieter, safe loading. Nothing causes cattle to balk more than a shaky chute or ramp.

Build the ramp as close as possible to the road or high-

way, so that it will be convenient for trucks and trailers to load and unload. Use concrete for the walls that form the base of the ramp. The concrete floor is laid after earth fill is compacted in place. This rough finish on the walking surface of the floor prevents the animals from slipping.

Heavy pressure-treated wood posts support side walls built

of two-inch plank lumber. These posts are set in the ground and securely anchored to the concrete walls.

An elevated catwalk for the operator is provided along one side for convenience in driving the cattle. This is constructed of 2-by 10-inch pressure-treated plank lumber. All fastenings should be galvanized to prevent rust.

In hot climates, where cattle are often moved at night to reduce the stress caused by heat during the day, a well-lighted ramp is recommended. Where electricity is not available. battery powered lanterns can be used.

Working drawings of Plan No. 5960, by the USDA Cooperative Farm Building Plan Exchange, are available from Agricultural Engineering Extension, College of Agriculture and Homer Assumption, University of Nebraska, Lincoln, Nebraska 68503, for 25¢ plus sales tax. Remittance for the plan should accompany request.

Yield Grading Makes Sense, Dollars

Today in the cattle industry, more and more people are joining the "in" group—the breeders, feeders, packers, wholesalers and retailers who realize what retail-cut yield variations in beef carcasses mean in dollars and

They know that at present rices, each one per cent change in retail cut yield cutability means a retail value difference of nearly \$2 per hundred pounds, says Edmund Tyler, an official with the USDA Consumer and Marketing Service.

This means that for 600-pound carcasses, a 15 per cent difference in cutability means a difference in retail value of \$175. This much difference in value is unusual, but value differences of \$40 to \$50 are quite common,

says Tyler.
It is this fact that has spurred the use of the U.S. Department of Agriculture's yield grades— designed to measure differences in the cutability of beef car-

Literally, the yield grades measure the yield of boneless, closely trimmed retail cuts from the high-value parts of the car-cass—the round, loin, rib and chuck. However, they also re-flect differences in total yield of retail cuts. The grades are designated numerically, with Yield Grade 1 denoting the highest yield and Yield Grade 5 the lowest.

Since 1965, USDA's Consumer and Marketing Service has offered an official yield grading service, which may be used together with, or separately from, its quality grading service for beef

That this service is filling a major need in the livestock m keting structure is indicated by the steady growth in its use, according to Tyler. During most of 1969, more than 200-million-pounds of beef were yield graded each four weeks. This is equi-valent to 21 per cent of the beef that is quality graded by USDA

In some areas considerably ore beef is yield graded than

the national average cited above. In the Texas area, for example, more than half of the beef qualigraded is yield graded. In the Colorado area, about 37 per cent of the quality graded beef is yield graded too. A number of major beef slaughtering plants are yield grading all carcasses that quali-

fy for Yield Grades 1, 2 and 3.

A significant development in industry use of beef yield grades. came in two auction sales held earlier this year at the Lugbill Auction in Archbold, Ohio—one of the largest auctions east of the Mississippi River. For the first time, live cattle were sold at auction on a carcass weight basis that included price differences according to official quality grade and yield grade.
The system worked as follows,

says Tyler: Bidding on the cattle was on the basis of a U.S. Choice, Yield Grade 3 carcass. Quality and cutability premiums and discounts were established before the sale.

After the cattle were slaughtered, each carcass was individually graded by a USDA grader for both quality and yield grade. If a carcass graded higher or lower on either of the two factors in the established base (U. S. Choice, Yield Grade 3), the final payment was adjusted. For example, at the second

See YIELD GRADING, page 8

auction, owners of animals that produced carcasses of Choice quality grade with Yield Grade 1 received \$3 per hundred pounds more than the base price. Yield Grade 2 carcasses brought \$1.50 per hundred pounds more. On the other hand, owners of Yield Grade 4 carcasses took \$1.50 per hundred pounds less than the base of Yield 3, Yield 5 car-casses \$3 less.

The main reason for initiating this new method for selling cattle, according to the inde-pendent Livestock Marketing Association of Columbus, Ohio, was to provide financial incentives for producers of high-quality, high-cutability cattle. Results of this new auction method are be-ing studied, and further sales on this basis are planned.

Yield grades are also important in beef cattle improvement programs. Thickness of muscling and the production of high-quality lean with a minimum of excess fat are heritable traits. So, breeders who want to im-prove their cattle along these lines may do so by considering these factors in selecting breeding animals.

USDA's Beef Carcass Evaluation Service can help breeders by providing detailed carcass data on individual animals, such as rib-eye size, marbling, tex-ture and color of lean, fat thick-

The Wayne Herald Farmer-Feeder, Monday, July 27

Ventilation Is Important To All Livestock Growers

has finally arrived, warns Wayne Fisher, area agricultural en-gineer at the University of Ne-braska Northeast Station near Concord. Proper ventilation of animal buildings is essential dur-ing this time of year, he says. Following are some of the rec-

ommendations Fisher passes on to farmers in northeast Nebraska who are trying to make their livestock as comfortable — and therefore as profitable - as pos-

Buildings that depend on na-tural ventilation should be opened on all sides to allow proper distribution of air passage fro available winds. Environmentally regulated buildings using mechanical ventilation should be prepared for the warm weather as well. Fans, thermostats, sh ters, louvers and baffles should be cleaned. Electric motors should be lubricated according to manufacturer's instructions and all bolts, keys and set screws on the fans should be checked well, since operational vibration tends to loosen these.

Inlets should be adjusted so air is brought directly into the building and not passed through the loft. Provision should be made to provide circulation of air from the eaves through the loft and out of gable louvers or ridge ventilators. Preventing heat build-up the loft will help keep the

building cooler.

Within the building itself, direction and velocity of air mo ment are important parts of a ventilating system any time of the year but especially in summer. During the warmer seasons the air should move down the outside walls and across the pens giving the animal full benefit of fresh air. Inlet baffles should be de-signed and adjusted so this is ossible. Both direction and size of opening should be considered.

To have proper air distribu-tion in an environmentally controlled building air inlets should be opened such that air velocities be maintained at 800 to 1,000 feet per minutes. Some simple calculations will give the opera-tor a good approximation on how large the inlet openings will need to be inside the building.

Two sample problems would be as follows:

1. Assume a 30-sow farrowing ouse 80 feet long. If the ventilation equipment is designed according to the recommended 210 cubic feet per minute per sow in summer, the total volume will be 6,300 cubic feet per minute.

We need inlet velocities of at least 800 feet per minute so dividing this into 6,300 we find

Yield Grading

(Continued from page 6)

breeder request. arcass data should en-Such able breeder to determine imals have the ability to procarcasses. For more informa-tion about this USDA service, a USDA meat grader rearest packing plant, at the

vestock and me at spe Mos s believe that the use grades will continue to if consumers increase ciali of yiel their d nands for closely trim med be cuts (and they probably will) retailers will give increasing attention to differences betwee: rield grades will become greater in turn, packers will pass this demand back to the producer in the form of price differentials for the different yield ades of live animals.

of inlet openings inside the build-ing. If this is an eave inlet system running almost the length of the building we will have about 75 feet on each side of the building or a total of 150 feet of in-let. If this length, 150 feet, is divided into the inlet opening area, eight square feet, we find we need an opening of between 1/2 and 5/8 inch of full length of the building on both sides.

The ventilation requirements and consequent inlet size will depend on the use of the building and its dimensions.

2. If a swine finishing building is considered, such as those at the Northeast Station, ventila-tion requirements are different to the animal density and building shapes.

The larger controlled environ-ment swine buildingsat the Station are 36 feet long and designed to handle 120 pigs. The summer

ventilation requirement for pigs which are close to market weight is 100 cubic feet per minute for each animal, so the building is designed for air movement of

designed for air movement of 12,000 cubic feet, per minute. With velocities needed of at least 800 feet per minute, you would need a total inlet area of 12 to 15 square feet. The eaves inlets are 32 feet in length on each side or 64 feet in total length. Thus a 2 1/4 to 2 3/4 inch inlet opening the full length of the baffles on both sides would give the proper velocities provided there were no other air leakage openings into the building.

When setting baffles you should make an estimate of the area of air leakage openings and re-duce the size of inlet area by this amount to obtain the proper velocities.

The performance characteris-tics of the fans should be known as well, since as inlet velocities are created, negative pressures will develop in the building and will reduce the output of the fans. The output of a particular fan system should match the inlet area and air velocities.

During summer months espe-cially and during the whole year

of air flow need to be more exact in design than volume Proper design for velocity and direction will carry air well into the building and throughout the building to create a mixing action. Proper odor control and maximum animal comfort does not occur unless these design fac-tors are considered. When in-lets are too large or doors are left open no inlet velocities are possible and ventilation by me-

chanical means is not effective.

If insulation and ventilation are designed according to the heat and moisture production of the recommended animal density, buildings should stay cooler than the outside temperatures during the peak heat of the day.

If doors or windows are opento supplement mechanical ventilation with natural air movement make sure that the design is such that the mechanical ventilation is assisting the natural air movement not resisting it.

Also make sure there is a good distribution of air within the building and more than alley ways are effected.

If you have a well-built building make sure you are not causing animals to be warmer by opening

Apple Spice Cake Good Warm, Cool

Anybody for apple spice cake? If so, here's one way Mrs. Lawr-ence C. Carlsen of Wakefield suggests making it.

1 cup sugar

1/2 cup margarine 2 eggs, beaten 1/2 cup cold coffee 1/4 cup nut meats

1/2 cup raisins
1 cup raw apple, chopped
1/2 teaspoon each of cinnamon

1 teaspoon soda

1/4 teaspoon salt 1½ cups flour

Cream, margarine and sugar add eggs and coffee, mix well. Add flour, sifted with soda, spices and salt. Stir into apples and nuts and flour mixture. Bake in an eight or nine inch pan in moderate oven at 350 degrees for 35 minutes.

Result, says Mrs. Carlsen, is a treat which is delicious either warm from the oven or cooled

doors than they would be without the uncontrolled hot air entering from outside.

THE WAYNE HERALD

SALUTES Wayne Area

Farmers & Feeders

FARM and CITY

Farm and City go hand-in-hand in a rural area such as Northeast Nebraska. Grain and Livestock production are the backbone of the area's economy.

The Wayne Herald strives to serve this and the surrounding communities by presenting topical and informative news and area happenings. We wish to thank the merchants who advertised in this, our first annual Farmer-Feeder supplement, enabling us to present it to you, the reader.

THE WAYNE HERALD

Big Feedlot Uses 4 Sewage Lagoons

The Dixon County Feedlots rest of Allen is using four large sewage lagoons to catch runoff from the cattle pens and avoid pollution of surrounding land and streams.

Those lagoons measure about 200 by 450 feet and can handle all the runoff equivalent to a nine-inch downpour, according to Pat Noonan, one of the officials in the feeding operation.

Noonan said the whole feeding

operation was built after study-ing large feedlots in the South-'We did what they are doing and even more in an attempt to avoid pollution," says Noonan.

The wastes from the approximate 10,000 head of cattle on feed at the site are of no danger to any surrounding land, says the official.

The lagoons are emptied when they become full. Wastes from the lagoons are pumped through a six-inch pipe about a mile to pasture around the feeding operation. There the wastes are spread on the land through the use a portable irrigation system. The pumps are capable of carrying about 500 gallons a minute through the pipes.

The problem of waste disposal

from livestock has become more and more a subject of talk in the past few years. One result of that problem has been numerous suits filed against live stock feeders. The Dixon County Feedlots is now involved in a legal dispute with a person who lives near the

lots because of alleged pollution from those lots.

The University of Nebraska agricultural engineers have been keeping abreast of the problem of livestock waste pollution and have conducted various experiments to determine the best methods of handling waste ma-

One experimental method consists of a cattle feedlot sloped-for drainage, a polyethylene-lined settling basin at the base of the slope - in which a perforated tile is imbedded in crushed limestone and a detention pond that holds the liquid carried through the tile.

The solid wastes accumulating originally in the settling basin are disposed of by using conventional manure-handling equipment. Very little solid material transported through the perfor ated tile to the detention nond. Sedimentation tests in the pond have revealed no appreciable

build-up of solids.

The liquid waste accumulating in the detention pond is periodically applied to nearby fields or pasture land as afertility booster. Removal for use at the Field Laboratory near Mead is conducted by using a small pump and pipeline system, which carries large amounts of liquid to be distributed directly through a

sprinkler or gated pipe system.

The problem of pollution will be one of the highlights at the 19th annual Tractor Power and Safety Day scheduled for July 30 at the University Field Labora-

Numerous demonstrations, exhibits and informative talks including a new tractor and safety cab parade, dual tire usage and soil compaction information, the automating of long hay handling, attractions for homemakers, and tractor driving skills for women will also appear on the program.

Irrigation May Pay Off On Fritz Temme Farm

rural Wayne said it looked like his irrigated crops might pay off this year.
He said he irrigates about 60

of corn and some pasture and alfalfa by pumping out of

west of Wayne.

Irrigating the land is a lot of work, says Temme, but it pays off many times. The irrigating setup is moved about every six hours or at least three times in 24 hours, says Temme. For the past two weeks Temme has been irrigating almost constantly.

Running the irrigation system and running his milking operation keeps Temme tied to his farm much of the time. He runs a Grade A milking operation with a total of about 55 Holstein milk cows. He has a three-stall milking set-

Total land being farmed by Fritz is 480 acres. A total of 275 is in corn and sorghum this year, 30 is in oats and the balance is in hay and pasture. The breakdown is followed about the same way each year, says the

Forty-inch row spacing is used. in both the irrigated and unir-rigated corn on Temme's farm.

He banded a 14-inch strip in his corn fields with herbleide this year and said he is sold on that practice because it gives him more leeway about when to cultivate. He uses no minimum tillage on his farm.

About treatment for rootworms. Temme says he splits his applications, putting down about half when planting and the other half when cultivating. That method seems to be working fairwell for him. The problems he has with that system seem to be no more than others are having, ~ said.

rtilization is done on his land according to results of tests taken either by him or a com-mercial fertilizer dealer. He says he trys to follow plete testing program on his

Cattle fed on his land number about 350 each year. He has no special breed he likes best and feeds about every one available. He noted that he has fed more cattle from the South in the past few years because of the replacement cost.

Temme handles most of the dairy operation on his farm and his hired man takes care of much of the cattle feeding. Also helping out are Mr. and Mrs. Temme's three children: Karen, 16; Douglas, 14, and Judy, 10. Mrs. Temme's name is Joann.

Fritz has been farming since getting out of the service in 1955. His farm is located three miles north and one and a quarter west of Wayne.

Facts...not "Chin Music" FEEDING RESULTS ON 59.148 HOGS FED THE PUPINA WAY!

Records on 615 bunches of hogs raised in Iowa, Minnesota, and Nebraska show 59,148 hogs produced pork for an average feed cost of 9.7c per pound. Average feed conversion was only 3.4 pounds of total feed per pound of pork.

Most records were from birth to market. Feed costs included corn (figured at local market price when fed), Purina Chows fed, routine medication, grinding and mixing and delivery charges.

What will Purina's Hog Program do for you? You should do at least as well as these averages. Feed your next bunch of hogs the Purina Way. We'll help you keep accurate records of results you get.

Visit our store. We'd like to tell you more about Purina's proved hog feeding programs

Feeder's Elevator,

LOW COST PRODUCTION... the reason why more farmers feed PURINA

Full-Fat Beans Gaining Fans in Are

Home cooked soybeans, a nutritional development which is only beginning to be felt by farmers and feeders in the Midwest, are now available to livestock producers in northeast Nebras-ka.

Several soybean cookers are now in use in the area, including

ones near Pliger, West Point, Wausa and Randolph,

The Randolph cooker is the soybean extruder developed by a national feed company, Triple "F" Feeds, It's a unique process whereby soybeans go through a fairly simple process of pressure and heat from friction which

crushes and cooks the whole soybean. The end product—a fullfat soybean meal—is extruded or pushed out a small opening in finished form.

The extruded meal is considered by many to be superior to soybean me all purchased after commercial processing. Reason: the fat or oil—a substance very high in caloric energy—has not been removed from the meal as is done in commercial processing.

The Randolph extruder, located at Randolph Feed & Milling, has been in operation only for the past few months, Owner of the business, Bob Alderson, says that the reports he has received from feeders who have used the home cooked soybean meal produced at his business have been very good. Some of those reports about high gains are even hard to believe, says Alderson.

Some of the far mers come from as far as 40 miles to have their soybeans processed, says the owner. Three or four of those far mers fairly regularly buy about seven to eight tons of full-fat soybean meal while another eight or nine buy four to five tons at a time. The rest — about 900 tons by the middle of July — has been sold in small lots of one or two tons. A total of about 20 farmers are fairly regular customers of the Randolph enterprise.

prise.

The full-fat soybean has been under study for years, but only within the last year or so were units put on the market which were economically feasible.

The Wayne Herald Farmer-Feeder, Monday, July 27

EXAMINING THE EXTRUDER portion of the portable soybean cooker at Randolph are Wendell Eddie, left, and Bob Alderson.

And what makes full-fat soybeans feasible in the first place? Here's the way Alderson explains it:

Under the present method, the soybean producer transports and sells his product to a local elevator. The elevator sells to a soybean processor who removes the oil from the bean and sells the meal back to the feed manufacturer. The feed manufacturer sells the meal to the local feed dealer or elevator and it is then sold back to the farmer.

Under the home cooking method, the soybean producer takes his product to a local elevator with a cooker (or does it on his own farm if he is big enough to afford one) and has the bean processed there. The meal is sold back to him—with the oil still in it. Costs of transportation, middle man and loss of the valuable oil are avoided, says

Although it's difficult to say how much a person might be able to save through the home cooking process, estimates show that each ton of full-fat soybean may be worth up to \$50 to the farmer.

Alderson has also built one of the few portable extruders in existence. That extruder would sell for about \$15,000, or about \$3,000 more than the permanent one he has installed at Randolph. The portable extruder, however, is not for sale and will be used for display at large fairs or at large feed conferences.

There are at least two other cooking processes also being studied. One of them uses a "roasting" process whereby infra-redrays cook soybeans by internal heat. Cooking time is about three minutes.

Another process involves steam processing equipment.

The soybean extruder has soybeans fed into a unit consisting of a screw housed in a steam jacketed barrel designed to extrude material through a restricted opening. The screw forces the material out a narrow die head opening. Oil cells are ruptured, the growth-inhibiting factor is eliminated and the free oil is reabsorbed by the mash.

According to a story in the 1970 Nebraska Swine Report, a publication of the University of Nebraska-College of Agriculture and Home Economics, a swine producer should take into consideration three things when contemplating home cooked soy-

beans.
Those factors:

—Feed Efficiency. Experiments have been varied, the story says, when comparing home cooked soybeans to soybeal meal.

"Consequently, we cannot conclude that rations containing cooked soybeans will produce a pound of gain with 5% or 10% less, or even the same amount," the story says.

-Location. A produce close to a commercial crusher will possibly be better off dealing there

than buying or using a cooker.

Cost of Cooking Soybeans.

A single cost-of-gain budget cannot be worked out for a cooked soybean ration vs. a conventional ration because of the varying cost per ton from farm to farm.

RURAL ELECTRICITY

Electricity helps the American farmer to raise and care for more livestock, hatch more cows and keep food fresh and clean. The end result is fresher, more economical food on everyone's table.

We are proud of the role we have been able to play in the electrification of our portion of rural America . . . and we continue to meet the everincreasing demand for more and better electric service.

The Wayne County Public Power District is in its 31st year of serving this area with dependable low cost electricity. We now have 1112 miles of lines in Wayne and Pierce counties serving more than 2450 meters. The results of these facilities has been a rising standard of living for us along with the rest of the nation ... Rural ctizens buy refrigerators, ranges, air conditioners, fans, freezers, milking machines, washers, dryers, toasters, power tools, and many other items. That means jobs for people in the towns and cities where such products are manufactured. It also means jobs in our area for wholesalers and retailers as well as service people . . . This is only one of the many ways in which the rural electrification program benefits everybody.

Nursery on Haisch Farm Has Heated Floors

nursery building for his small pigs are one thing the rural Concord farmer included in his

The loops will enable Haisch. who farms about one mile south of Concord, to let the temperature in the building drop to about 65 or 70 degrees in the winter

since the pigs will not lose as much body heat to the heated concrete. If the pipes were not built into the floor, says Haisch, he would probably have to keep the heat in the nursery around

75 or 80 degrees. A 1959 graduate of Laurel High, the swine producer only this sum

mer began using the nursery building. Measuring 37 by 56 feet. it will house about 360 pigs when in full use.

The nursery has a walkway measuring just over two feet, four feet of concrete in the pens and eight feet of slats above derground pits. The slats take

three-quarter inch spacing.
Pits measuring 56 feet by eight

feet wide and nine and a half feet deep will collect the wastes from the pens. Halsch expects he will have to empty them about once a year. The wastes will be used on the 400-acre farm

Haisch operates.
The farrowing house Haisch now uses measures 80 by 26 feet and has 28 crates.

Haisch hopes to have a finishing building in operation some time next year. Right now he

finishes his pigs in open lots. Preferred breed for Haisch: Yorkshire-Hampshire cross. He says he started with nine Hampshire gilts and later started using

The farmer says he feeds the pigs dry corn mixed with some oats and protein. The corn and oats are located in bins about 100 feet from the nursery. The feed is ground and mixed in a portable unit and then transported

to the pigs.

Haisch, who markets much of the time in Sioux City but who has marketed on grade and vield in Laurel, buys his boars and raises all his stock.

Like many swine raisers, he

on't let anybody into his buildings unless they wear boots to prevent disease protection. The pigs do better when they are kept as free as possible from disease and are clean, says Haisch, and there is less death loss.

Although Duane Harder of Laumuch of the work in

most of the design is his own, down to the way the self-activated waterers are installed.

Yard & Garden Tips . .

Q-The leaves on a snowball bush are curling as they first come out. The bush blooms but the flowers don't last long. What is causing this?

A-The condition is usually caused by a type of aphid that lives within the curled leaves. The best remedy is to spray the bush soon after leaves begin to open up in the spring. Meta-systox-R is an effective spray

Q-Tomato plants have curled leaves. They have been dusted with Zineb and it has not helped. What is the problem?

A-The curling is due to the hot, dry weather which inhibits the plants from developing as they should. The curling does protect the plant from excessive loss of moisture. Once the leaves curl up they remain that way, but the plant will still continue to function.

IRVIN HAISCH says it doesn't take young pigs long to master these water

in his nursery. The waterers were installed in a unique manner by Haisch.

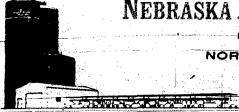

Why Dry Corn?

- Offers Continuous Filling -- No harvest time lost waiting for the dryer to catch up and no big fuel cost.
- Is Versatile So you can process either high moisture shell corn or high moisture ground ear corn.
- Is Permanent -- Glass fused to steel -- No annual coating or painting required, strong acids will not harm the glass coating.
- A Size for Every Farm From 6500 bushels to 30,000 bushels.
- Has the Only True Breather System -- So you can feed high moisture corn even in the hot summer months and not worry about spoilage.

GET THE FACTS ABOUT THE PROFIT YOU CAN MAKE FEEDING YOUR LIVESTOCK HIGH MOISTURE CORN PROCESSED THROUGH A HARVESTORE.
