Device Invented to Prevent Paralysis of the Fingers

The typewriter is a very useful and necessary piece of machinery in the office. It is, however, a very delicate and sensitive piece of machinery, and it is very easy to injure the fingers by using it for a long time without taking any special precautions.

The device is a simple one, and it is very easy to use. It consists of a small piece of wood or metal, which is placed between the fingers and the keys. This prevents the fingers from being pressed too hard against the keys, and it also prevents the fingers from being bent too far back when typing.

It is a very simple and effective device, and it is very easy to use. It is a very useful and necessary piece of machinery in the office, and it is very easy to use. It is a very simple and effective device, and it is very easy to use.

A special exhibit will be made on August 12th, Woodmen's day. If you contemplate purchasing a Piano or Organ within the next year don't fail to avail yourself of this opportunity.

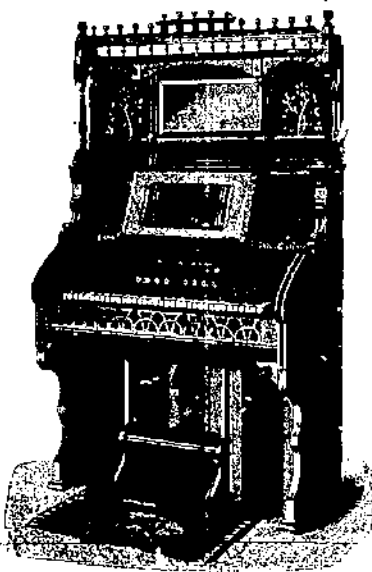

We sell the following organs:
The Celebrated Bates, that has led the world for fifty-two years.

The amount of lumber in an Estey Organ is one hundred feet. There is lumber enough in all of the Estey Organs which have been sold to build a fence around the world. This is true of no other organ.
